

Raspbian Jessie Static IP Address

<https://pi-hole.net/faq/how-do-i-set-a-static-ip-address-in-raspbian-jessie-using-etcdhcpd-conf/>

How do I set a static IP address in Raspbian "Jessie" using /etc/dhcpd.conf?

Despite lots of confusing information out there, it is actually pretty straightforward to set a static address in Raspbian.

Being by editing the file (do not use /etc/network/interfaces anymore!)

```
sudo vi /etc/dhcpd.conf
```

Then all you need to do is append this to the bottom of the file, substituting the correct IP address you want.

```
interface eth0
static ip_address=192.168.1.141/24
static routers=192.168.1.1
static domain_name_servers=192.168.1.1
```

Restart your Pi and you are set!
